Reliable esp32-s3 super minis - good experience with this seller I've had mixed results with esp32-s3 super mini boards from various sources, so i was cautious ordering these. At \$3.85 each, the price was reasonable enough to give them a try. So far, very pleased. I'm running wled 0.16.0-alpha on several of these in a 24/7 test setup, and they've been rock solid. No boot issues, stable wifi, and they handle the neopixel control without problems. Obviously can't make blanket guarantees about any aliexpress esp32 boards, but this particular seller sent me good quality units. If you're looking for affordable s3 super minis for wled or similar projects, these are worth considering.

Works amazingly. Be reminded, that the sdram has to be enabled via arduino ide by going to tools>sdram and select spi sdram type!

report

ESP32S3SuperMini is an IoT mini development board based on the Espressif ESP32-S3 WiFi/ Bluetooth dual-mode chip. The ESP32-S3 is a 32-bit RISC-V CPU that contains the FPU (floating point unit), which can perform 32-bit single-precision operations and has powerful computing power. It has excellent RF performance and supports IEEE 802.11b /g/n WiFi and Bluetooth 5 (LE) protocols. The board comes with an external antenna to enhance signal strength for wireless applications. It also has a small and delicate form factor combined with a single-sided surface mount design. It is equipped with a wealth of interfaces, with 11 digital I/ OS that can be used as PWM pins and 4 analog I/ OS that can be used as ADC pins. It supports four serial interfaces: UART, I2C and SPI. The board also has a small reset button and a boot loader mode button.

Based on the above features, ESP32S3SuperMini is positioned as a high-performance, low-power and cost-effective iot mini development board suitable for low-power iot applications and wireless wearable applications.

ESP32S3-SuperMini

#Hardware description

#Product parameter

Powerful CPU: ESP32-S3, 32-bit RISC-V single-core processor, running at up to 160 MHz

WiFi: 802.11b/g/n protocol, 2.4GHz, support Station mode, SoftAP mode, SoftAP+Station mode, hybrid mode

Bluetooth: Bluetooth 5.0

Ultra-low power consumption: deep sleep power consumption of about 43μA

Rich board resources: 400KB SRAM, 384KB ROM built-in 4Mflash.

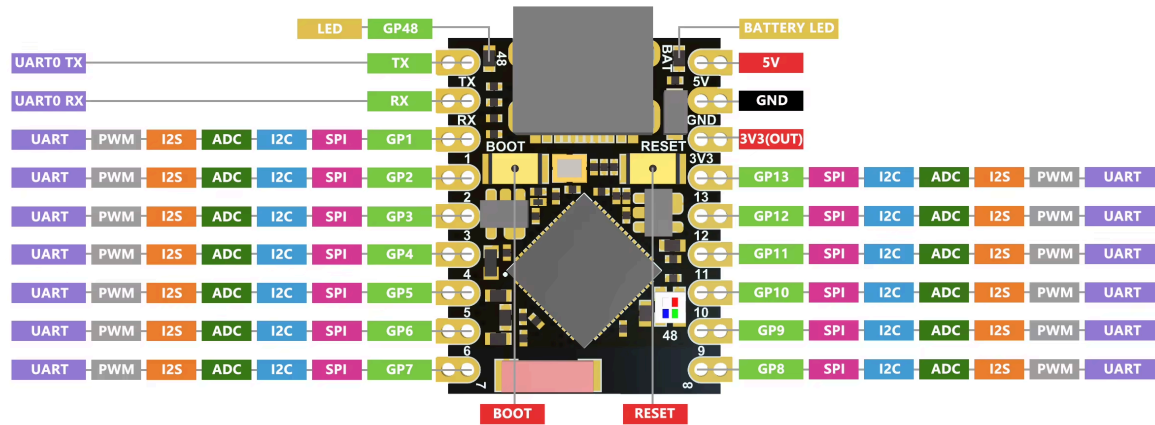

Chip model: ESP32S3FH4R2

Ultra-small size: As small as the thumb (22.52x18mm) classic shape, suitable for wearables and small projects

Rich interface: 1xI2C, 1xSPI, 2xUART, 11xGPIO(PWM), 4xADC

Onboard RGB, blue LED: common GPIO48 pin

#尺寸图

Dimension drawing

#External power supply

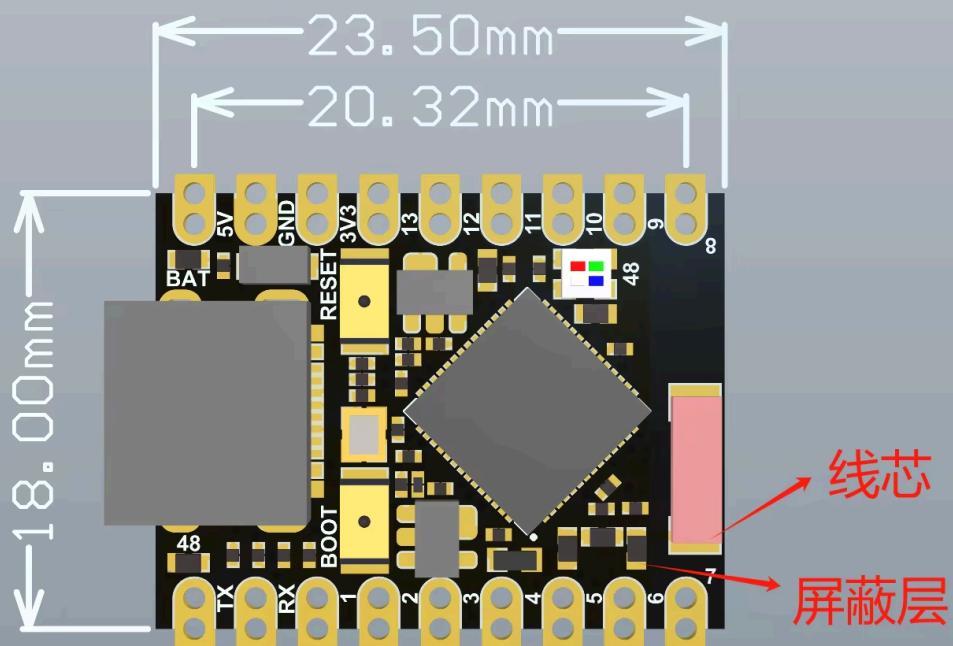

If external power supply is required, just connect the external power + level to the B+ position on the back of the board, and connect the negative pole to the B- on the back. (Support 3.3 ~ 6V power supply). You can charge the battery by connecting USB.

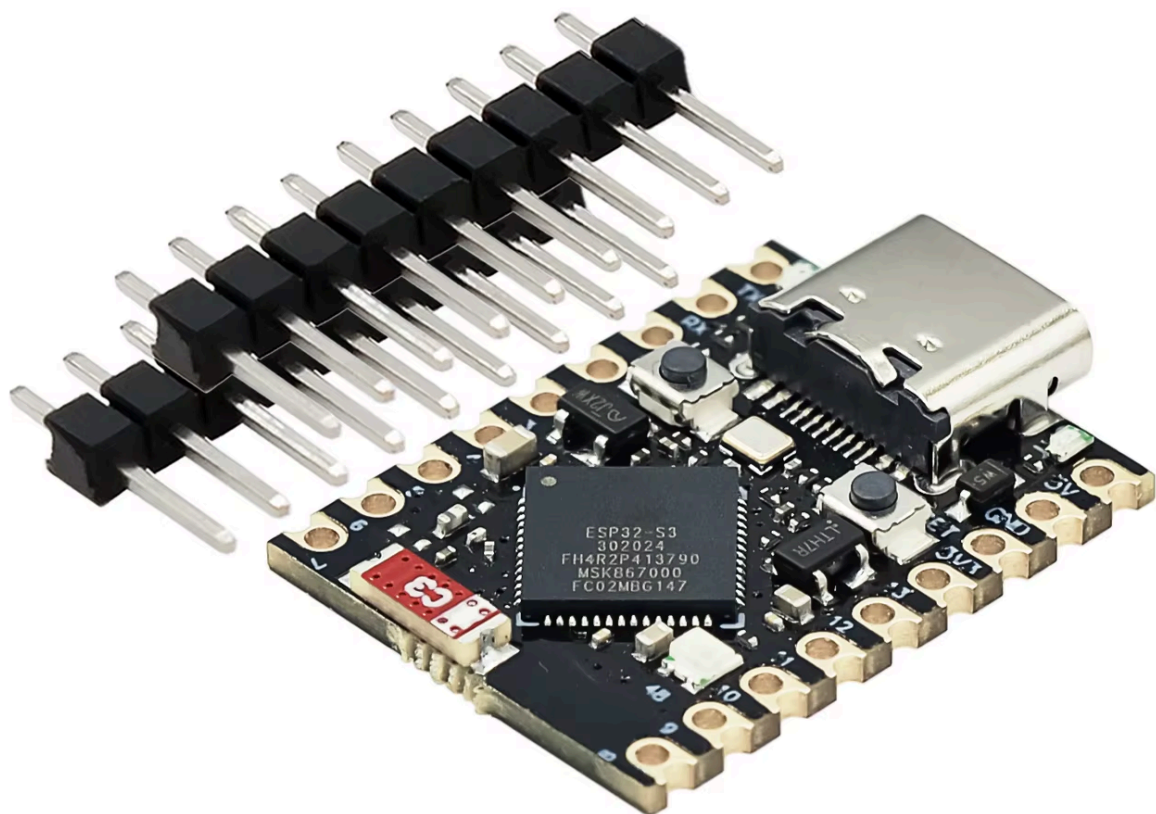

Look out

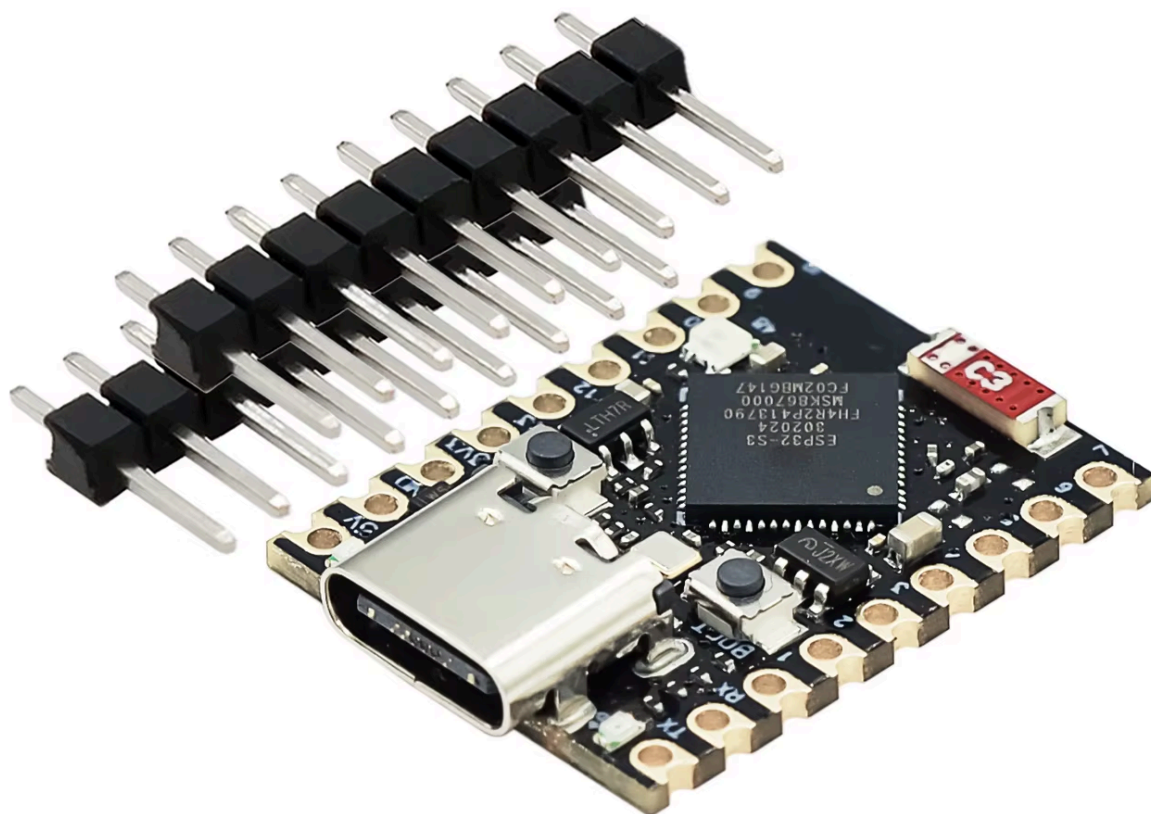

When welding, be careful not to short-circuit the positive and negative electrodes and burn the battery and equipment.

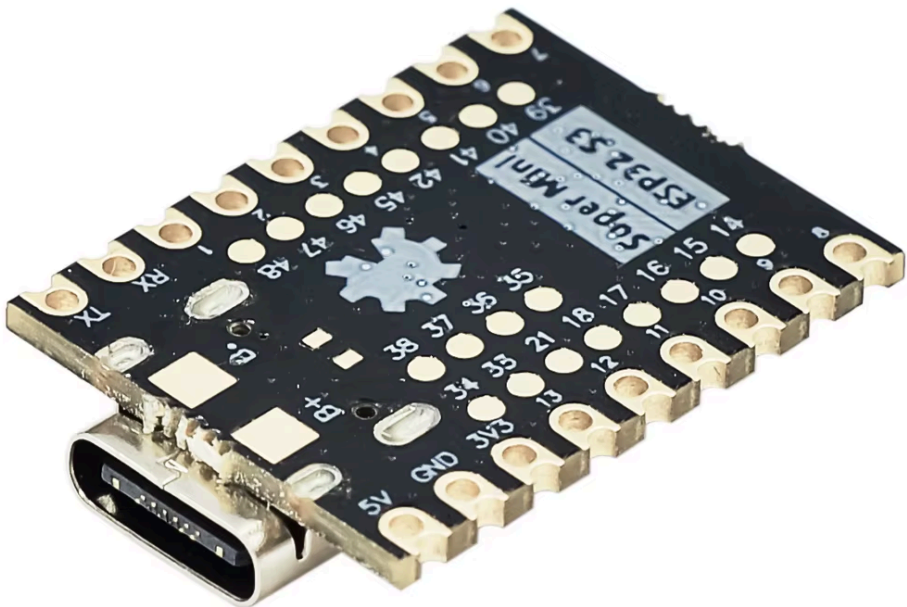

#WIFI antenna

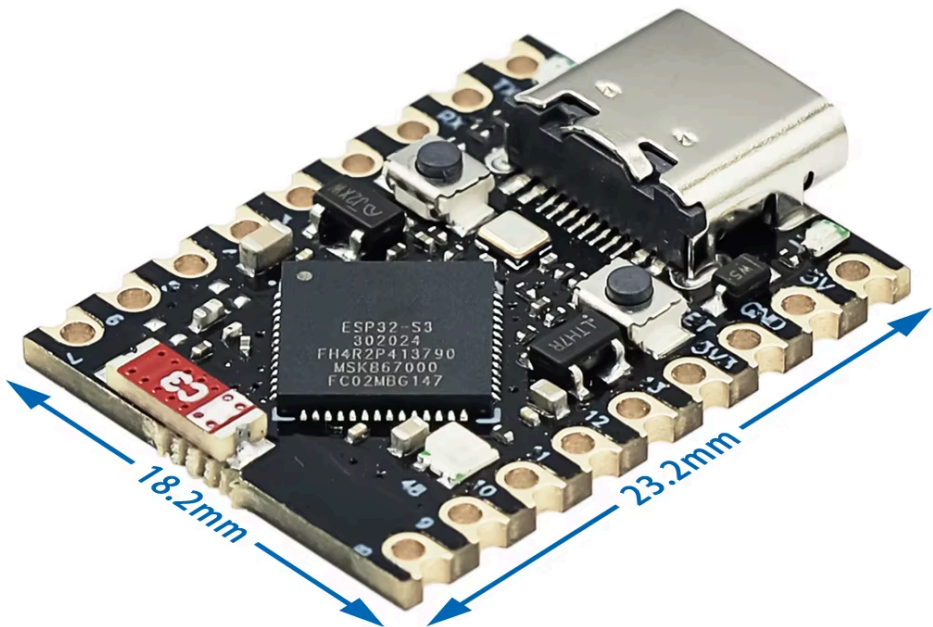

If you want to use an external antenna, you can connect an external antenna according to the picture below.
